

Connecting a Document Camera to an LCD Projector and a Desktop Computer

INSTRUCTIONS

1. Disconnect the **computer monitor cable** from the back of the computer.
2. Connect the **splitter** to the monitor port of the computer.
3. Connect the **computer monitor cable** to one end of the splitter.
4. Connect one end of the **long document camera cable** to the other end of the splitter.
5. Connect the other end of the **long document camera cable** to the document camera at the **VGA IN** port.
6. Connect one end of the **projector cable** to the document camera at the **VGA OUT** port.
7. Connect the other end of the projector cable to the projector at the "**computer in**" (not "monitor out") port.
6. Connect **document camera's power cable** to document camera. Make sure the **document camera's power cable** and the **projector's power cable** are plugged into an electrical outlet.
7. Press the **power button on the side of the document camera** to turn on the document camera.
8. Press the **power button on the projector** to turn on the projector.
9. **Lift the arm** of the document camera and **adjust the camera head**. The camera head should be pointed down at the table in front of the document camera.
9. Place your document on the table in front of the document camera and beneath the camera head. Press the **CAMERA** button on the document camera. The document on the table will be displayed by the projector.
10. Adjust the focus on the camera head.
